System Monitoring

Cost Effective Monitoring

Fully managed IT support and network maintenance arrangements can often be cost-prohibitive for small, and medium sized organisations. Community Business Connect has created an offering which helps reduce the cost of proactively managing your IT infrastructure down to as little as $10 ex. GST per machine, per month - which also includes managed antivirus.

CBC's robust IT management platform allows the provision of low cost, unintrusive system agents to be deployed across your network to help monitor system performance and alert you or us to problems as they arise, and sometimes even beforehand.

We can accommodate businesses of any size and sector and rates can be tailored accordingly. Our goal is simply to ensure your organisation receives the support required to foster continued growth and success. Whether it's a single meeting or ongoing support, we're here to help, and we'll do whatever we can to assist you in reaching your goals.

Packed With Features

Our agent can;

- Monitor hardware performance, such as low disk space or sustained high CPU usage, and flag anomalies before the issue is critical
- Alert us, real time, of errors in the event logs
- Allows the full management of Windows and other software updates, including blocking updates as required (including Windows 11)
- Allow us to remotely connect to a PC and offer support if required
- Provide automation for certain tasks in your environment
- Monitor backup systems and alert us in the event of backup failure
- Be configured to provide antivirus and cybersecurity protection
- Do all this and more!
